### Level 1: Elimination Controls

These refer to new measures that will be put in place to prevent crowding or close contact between people in the workplace. Ensuring physical distancing by reducing the number of people onsite is considered an "elimination control" in that this approach eliminates or removes the hazard (i.e. infected people) from being at the workplace.

### Level 2: Engineering Controls

These refer to new designs or modifications to plants, tools, equipment, ventilation systems, and processes that reduce the risk of exposure.

### Level 3: Administrative Controls

These refer to policies and standard operating procedures at your workplace that alter the way the work is done to reduce risks. Examples include timing of work, training, housekeeping, equipment maintenance and personal hygiene practices.

### Level 4: Personal Protective Equipment (PPE)

This refers to protective gear worn by people in your workplace to reduce their contact with other people who may potentially be infected with COVID-19 (e.g., masks, gloves, face shields, eye protection).
